

TD Series DC Current Tester

Main Functions

TD series testing equipment consists of control unit and DC high current output unit. It outputs 0-4000A 0.1% high accuracy DC current used in HVDC converter station and testing DC current transformer characteristics.

- Easy panel control with LCD display and rotary encoder
- Manual and auto test by software
- Output DC current waveform by USB port
- Multi high current connector for busbar

Specification

	TD2000A	TD4000A
Output Range	0-2000A	0-4000A
Port Voltage	5V	5V
DC Current Output Accuracy	0.1%	0.1%
Display Accuracy(rd)	0.2%	0.2%
Display Accuracy(rg)	0.05%	0.05%
Binary Input	2 Nos	2 Nos
Binary Output	1 No	1 No
Power Supply	3X380V ac, 22KVA	3X380V ac, 22KVA
Weight	80 Kg	110 Kg
